IMT 543 – Job Portal Management System

Database Specification: Purpose, Business Problems Addressed, and Business Rules

Team Members: Oindrila Choudhury, Subhiksha Mukuntharaj, Vaidehi Patil, Roshi Roy

Database Purpose:

The purpose of designing the online job portal is to provide candidates, ability to register to this application and search for jobs, manage their accounts. Each candidate will have an account with their own home page. Employers get to publish the jobs for their company to candidates, can register to the job portal and get their own account created and can post jobs to portal's database.

Registered employers can add or remove jobs and these jobs can be seen by various candidates and they can contact the concerned person for the job.

This thus gives job seekers a platform for finding a right and a satisfactory job according to their qualification. This job portal allows job seekers to create their profile and share their details relevant for job posting. Employer can select the best employees based on their requirements. This platform helps in building connections between employee and employer.

Business Problems Addressed:

- Allows the people using this platform to connect with other individuals based on their interest.
- Allows employee and employers to search for specific jobs and candidates accordingly based on their shared details.
- Create a public-facing platform to allow individuals to browse through jobs with more accuracy and autonomy, as well as make more informed decisions while applying for jobs.
- Recommend some courses based on the user's interest.

Business Rules:

- Each user has an unique User ID
- Each user can have zero or many Connections with people
- Each user can belong to zero or many communities
- Each user can have zero or many posts.
- Each employer will have an unique Employee ID
- Each job post has an unique Job Post ID
- Each job type has an unique Job Type ID
- Each skills set will have an unique Skill Set ID
- Each community/group has an unique Community ID
- Each Course will an unique Course ID
- Each candidate will have zero or many Education Details
- Each candidate will have zero or many Work Experience
- Each candidate will have zero or many Skill Set
- Each job post will have zero or many Skill Set
- Each job post will have zero or many Location
- Each job post will have zero or many Job Post Activities
- Each employer can have zero or more Job Post
- Each industry can have zero or many employers

Design Requirements (Credit to Professor Simon Wang)

- Use Crow's Foot Notation
- Specify the primary key fields in each table by specifying PK beside the fields
- Draw a line between the fields of each table to show the relationships between each table. This should be pointed directly to the fields in each table that are used to form the relationship
- Specify which table is on the many side of the relationship by placing a crow's feet symbol next to where the line ends.

Design Decisions:

#	Entity Name	Why is entity included?	How is entity related to others?
1	Communities	This entity will store the type of communities the user is involved in. Hence this would include User ID as well as Community ID.	This is related to Community Types entity which stores details about type of communities whereas Communities entity maps User ID with Community ID's
2	Community Types	This entity stores the various types of community.	This entity is connected to Communities entity in order to store corresponding Name of community
3	Connections with people	This entity stores the Connection ID which is symbolic of the user's connections with other people. Hence the primary key of this entity includes both User ID as well as Connection ID	This entity is connected to Login Details and shares a one to many relationship as one user can have many connections.
4	User Activity	This entity contains information on the activity of the user hence contains User ID and Activity ID.	User Activity is connect to Login Details to map it to user. One user can have 0 or many activities.
5	Activities	This entity is to map Activity ID and its description and type.	As this entity only describes user activity it is connected with one and only one relationship with User Activity.

6	User Demographics	This will store all the	This entity has a one to
0	oser Demographics	personal details of the	one relationship with
		user including his name,	Login Details of a User
		age, sex, email id etc.	as one User will have
		age, sex, email id etc.	only one unique User
			Demographics.
7	Login details	The main purpose of	This entity is connected
		this entity is to hold the	to several other entities
		individual login details	like User Demographics,
		of every user, like the	Candidate Profile,
		username and password	Communities, etc. i.e all
		details for signing in.	entities which is related
		This is mainly to keep a	to the user.
		track of what is the id	
		and details of every user	
		who signs in to this job	
		portal management	
		system.	
8	Job type	This entity stores Job	Joy Type share a one to
		type names for	many one relationship
		corresponding Job ID's	as one user can have
			multiple to one areas of
			interests which they are
			looking
			for.
9	Courses	This entity stores	This entity shares a
		information about	many to one with Job
		courses, their ID, name.	Type, as each Job Type will have some
		Job Type ID is used to map to job area of	preferred courses taken
		Interest by User in order	by candidate.
		to predict the right	by candidate.
		courses to the user.	
10	Resume Details	Resume Details consists	This entity is connected
		of User ID and Resume	to Candidate Profile.
		format of each User	One user can have
			either 0 or 1 resume
			uploaded.
11	Candidate profile	This entity mainly stores	This information is
		the first and last name	connected to entities
		of the candidate and	which require User ID as
		basically the id of the	it stores information
		candidate.	about the user and it
			will share a one and
			only one relationship.
12	Area of interest	This entity stores the	This is connected to
		kind of jobs the user is	Candidate profile and
		interested in. Hence it	Job Type as each
			candidate has an area

1		anneath a star of the	of imposed the second second
		contains the attributes	of interest stored as Job
		User ID and Job Type ID.	Type which he can use
			to allow the database to
			recommend Jobs.
13	Job post activity	This contains	This is connected to
		information on the job	Candidate profile by
		post activity of a user	zero to many
		hence also contains job	relationship as well as
		ID of the Job post	Job post to map it to
		applied.	the details of the job by
			zero to many
			relationship.
14	Job post	Contains details of the	This entity shares a one
		job post published by an	and only one
		employer. It contains	relationship with Job
		details of the job post	Post Skill Set and zero
		like post ID, Type ID,	to many relationship
		Employer ID, Location ID	with Job Location. It is
		and isActive which	also connected to
		indicates if job is	
		1	employer details by
		currently active.	zero to many
			relationship and Job
			Type by one to many
			relationship as each job
			mandatorily has a type
			or category.
15	Candidate education	This entity talks about	This entity is connected
	details	the education of the	to Candidate profile as
		candidate applying for	each candidate has its
		the job like his	own education details.
		undergraduation,	One candidate can have
		graduation degrees,	One candidate can have multiple degrees or 0
		_	
		graduation degrees,	multiple degrees or 0
		graduation degrees, major, what was his gpa	multiple degrees or 0 degrees hence it is a 0
		graduation degrees, major, what was his gpa and which university he	multiple degrees or 0 degrees hence it is a 0
16	Candidate skillset	graduation degrees, major, what was his gpa and which university he completed his schooling from.	multiple degrees or 0 degrees hence it is a 0 to many relationship.
16	Candidate skillset	graduation degrees, major, what was his gpa and which university he completed his schooling	multiple degrees or 0 degrees hence it is a 0 to many relationship. This entity is connected
16	Candidate skillset	graduation degrees, major, what was his gpa and which university he completed his schooling from. This entity stores the	multiple degrees or 0 degrees hence it is a 0 to many relationship.
16	Candidate skillset	graduation degrees, major, what was his gpa and which university he completed his schooling from. This entity stores the skills details of the candidate and his	multiple degrees or 0 degrees hence it is a 0 to many relationship. This entity is connected to candidate profile as
16	Candidate skillset	graduation degrees, major, what was his gpa and which university he completed his schooling from. This entity stores the skills details of the candidate and his proficiency level so that	multiple degrees or 0 degrees hence it is a 0 to many relationship. This entity is connected to candidate profile as each candidate has particular skillsets and
16	Candidate skillset	graduation degrees, major, what was his gpa and which university he completed his schooling from. This entity stores the skills details of the candidate and his proficiency level so that it is easier for the	multiple degrees or 0 degrees hence it is a 0 to many relationship. This entity is connected to candidate profile as each candidate has particular skillsets and these skillsets are
16	Candidate skillset	graduation degrees, major, what was his gpa and which university he completed his schooling from. This entity stores the skills details of the candidate and his proficiency level so that it is easier for the employer and the	multiple degrees or 0 degrees hence it is a 0 to many relationship. This entity is connected to candidate profile as each candidate has particular skillsets and these skillsets are connected to their
16	Candidate skillset	graduation degrees, major, what was his gpa and which university he completed his schooling from. This entity stores the skills details of the candidate and his proficiency level so that it is easier for the employer and the candidate to match as	multiple degrees or 0 degrees hence it is a 0 to many relationship. This entity is connected to candidate profile as each candidate has particular skillsets and these skillsets are connected to their names in the Skillset
		graduation degrees, major, what was his gpa and which university he completed his schooling from. This entity stores the skills details of the candidate and his proficiency level so that it is easier for the employer and the candidate to match as per the requirements.	multiple degrees or 0 degrees hence it is a 0 to many relationship. This entity is connected to candidate profile as each candidate has particular skillsets and these skillsets are connected to their names in the Skillset table.
16 17	Candidate skillset Candidate experience	graduation degrees, major, what was his gpa and which university he completed his schooling from. This entity stores the skills details of the candidate and his proficiency level so that it is easier for the employer and the candidate to match as per the requirements. This entity stores the	multiple degrees or 0 degrees hence it is a 0 to many relationship. This entity is connected to candidate profile as each candidate has particular skillsets and these skillsets are connected to their names in the Skillset table. This entity is connected
		graduation degrees, major, what was his gpa and which university he completed his schooling from. This entity is connected to candidate profile as each candidate has particular skillsets and these skillsets are connected to their names in the Skillset table. This entity is connected to Candidate profile as

	Τ		
		experience, salary, start	candidate may or may
		and end date of the job	not have work
		etc.	experience or has many
			experiences.
18	skillset	This entity handles all	Skillset entity is
		possible skills that a	connected to Candidate
		candidate can have. This	skillset and stored the
		is kind of the master set	names of the skillset
		which will help both the	corresponding to their
		candidate and employer	ID number. Hence is
		to select skills from as	one and only
		per their requirement	relationship.
19	Job Post Skill Set	This is where the	Job Post Skill Set has
		employer will specify	two primary keys and
		when he posts the job,	foreign keys which is
		what are the required	Skillset ID and Job Post
		skills for his job, so that	ID as it is connected to
		candidates who want to	skillset and the job
		apply can see if the skills	which requires that
		match, then apply as	skillset.
		per the skills he has.	
20	Job location	This is the location of	Job Location is
		the job like the city,	connected through one
		state, basically where	and only one
		will the job be based out	relationship with Job
		of.	Post which contained
			Job Location ID.
21	Industry types	This entity consists of	This entity maps the
		the types of industries	description of industry
		where there would an	ID of the Employer or
		Industry ID and	company and has a one
		corresponding name.	and only relationship
			with Employer Details.
22	Job post	Job Post entity consists	Job Post is connected to
		of the jobs posted by	Job Post Activity which
		employers. This entity	required Job Post ID of
		consists of details of the	User, it is also
		job	connected to Job Post
			Skill Set as it maps to
			the skill sets required by
			that job. Job Post also
			consists of a Job
			location ID hence it is
			mapped to Job Location
			entity which stores
			information on
			Location. The employer
			ID in Job Post entity is
			used to map to an
			1

			Employer who has
			posted the job with 0 to
			many job posts.
23	Employer details	This is basically the	Employer Details are
		entity that will handle all	connected to Job Post
		the employer details like	by one and only
		which employer it is and	relationship. It is
		all kinds of details about	connected to Industry
		the company like the	Types by zero to many
		industry it belongs to ,	relationship as it can
		the profile of that	have zero to many
		employer, when was it	industries.
		established, it's website	
		details etc
